Sounds good Bill. By the way, haven't heard from Leslie Savage yet.

Hi Phil,

Thanks for the feed back. I am glad that you like the modules that have been laid out. Ken did a great job of laying out an initial set of modules. My hope is that we move forward on the seis modules as well. It would be great to include them in the end products.

The seis modules are still on my radar. I have had to put them on hold a little be because of other priority. However, I have Jill Dean helping me out now, so we should be moving forward on those soon to. The next steps related to those modules is that Jill and I will be filling out a little bit more what Nancy and Ken have put together. After that I want to circle back with USGS, IRIS, and DOE. All three groups have expressed interest in helping/assisting. So, look out for some action in that front in the next month or two (I hope).

Hi Bill. This is a great project. Proposal looks good and the modules are comprehensive. If the seis module goes forward I'm assuming it would be done to fit in to this effort. Thanks.

Subject: NTW project proposal

Good afternoon all,

NTW has been working hard at addressing the concerns that you all brought up at the June Manager's meeting. We would like to get your feedback on the current training project proposal. The hope is that we are at a place where we can move forward to get Ron's signature on proposed project. I would like to have a discussion at the next Manager's call to get your feedback on the attached documents. These documents include the refined draft training proposal and the proposed list of training modules that NTW would work on. The order of the modules within the document are the proposed order in which NTW would develop the modules. Feedback on the proposal, the proposed list of modules and the proposed order of development are welcome.

Cheers
Bill
